## **Endorsement of PavaFetch Recovery Collar Technology**

On behalf of Jack Jack's Pack Street Dog Rescue, we proudly endorse the PavaFetch Recovery Collar—an innovative solution designed specifically for rescue organizations and lost pet recovery efforts. Operating across Central Texas, we face daily challenges in locating and recovering lost dogs, especially in areas where traditional GPS and cellular-based technologies fail. PavaFetch directly addresses these challenges with groundbreaking features. The collar automatically detects BLE disconnects and motion anomalies, triggering lost mode without human intervention. This ensures immediate response during critical moments when time is essential. Its 940nm infrared beacon enables detection by drone cameras up to 100 meters away, dramatically improving visibility during search operations in rural, wooded, or low-light environments. Additionally, PavaFetch requires no GPS, no subscription, and no cellular coverage, making it highly reliable in real-world rescue scenarios. Any drone operator or rescuer with a smartphone can assist in locating a lost pet—without specialized apps or equipment—expanding recovery efforts through community involvement. We believe PavaFetch represents the future of animal rescue technology, increasing recovery rates, reducing search times, and ultimately saving lives. We fully support the continued development and adoption of this technology.

Sincerely,
